

Two Marks

1. What are some common features offered by Cloud Service providers like AWS, GCP and Azure?
(CO1)
2. Enlist the goals of DevOps.
(CO1)
3. Can you name some of the build phases in Maven's lifecycle.
(CO2)
4. What does POM stand for in Maven, and what is its significance?
(CO2)
5. How do you install and configure Jenkins on a server?
(CO3)
6. How do you configure Jenkins to work with Java, Git and Maven for building project?
(CO3)
7. What is Ansible & how does it differ from other configuration management tools?
(CO4)
8. What is PUTTY?
(CO4)
9. What are the steps involved in creating a GitHub account?
(CO5)
10. Can you describe the steps required to build a sample code using Azure pipeline?
(CO5)

Two MARKS

1. What is DevOps?
(CO1)
2. What are the popularly used DevOps tools?
(CO1)
3. Why Jenkins is so popular in DevOps?
(CO3)
4. What is the use of HTML Publisher plugin?
(CO3)
5. How does Maven handle dependency management in a project?
(CO2)
6. Differentiate between local, central & global Maven repositories.
(CO2)

7. What is the use of YAML in Ansible?
(CO2)
8. Write a sample YAML file to install Apache Web Server on remote host.
(CO4)
9. What is Azure DevOps?
(CO5)
10. What is Continuous Integration (CI) & Continuous Development (CD)?
(CO5)

PART - B

11. (a) Explain in detail about Amazon Web Service. (13)

(or)

(b) Explain GitHub along with the important terms used by the developer. (13)

12. (a) Describe the purpose & importance of POM files in Maven. How do they define a project configuration? (13)

(or)

(b) Compare the concept & the dependency management mechanisms of Maven & Gradle. (13)

(or)

13. a) How do you ensure that Jenkins is effectively integrated with version control system like Git for continuous integration purpose? (13)

B) Can you provide an overview of commonly used Jenkins plugins such as:

- Git Plugin
- Parameter Plugin
- HTML Publisher
- Copy Artifact
- Extended Choice Parameter

(13)

14.

(a) What is Ansible Module? Explain any five commonly used Ansible modules.

(or)

(b) Explain the YAML basics essentials for writing Ansible Playbook, including key-value pairs & indentation rules.

15.

(a) What are the prerequisites for creating a GitHub account & what information is typically

required during the registration process?

(or)

(b) Walk me through the **process of creating a new pipeline in Azure DevOps**, highlighting the different types of pipelines available and their use cases.

11(a) Why DevOps? Explain DevOps architecture, tools, and lifecycle.

(13M)

(Or)

(b) What is GIT? Explain the service in detail.

(13M)

12(a) Can you explain the **Maven Build Lifecycle** in detail, including each phase's purpose and the order in which they execute?

(13M)

(Or)

(b) How does Maven plugin enhance the functionality of Maven? Provide examples of commonly used Maven plugins and their respective purpose.

(13M)

13(a) Can you explain the **architecture of Jenkins** and how it facilitates **continuous integration**?

(13M)

(Or)

(b) Define the purpose of creating a Jenkins build and how it interacts with the configured jobs and settings.

(13M)

14)a) Discuss the role of Ansible playbooks in automating complex tasks across multiple hosts, including the structure & syntax used within a playbook.

(CO3)

(OR)

b) What is the significance of master/slave configuration in Ansible, and how does it impact the automation process?

15)

a)What steps are involved in building a sample web app using Azure pipeline, and how can you customize the build process to suit the requirements of your project?

(or)

B)Discuss the structure a Key Components of The azure, pipeline, Yam file and provide explanation of how it can be modified to define Various stages a tasks within a pipeline

Part - C

16.

Explain how to create a pipeline in **Azure DevOps** with the application code of your own choice.

(or)

Create a **playbook** to create an empty file on remote hosts.

16) How can you create a **CI/CD pipeline** in **Azure DevOps** for an application built with a framework of your choice?

(Ex: Azure) Starting from pushing your code to a repository up to automating build and deployment?

(OR)

Create a **playbook** to gather the information about the remote hosts.
